Transparency to support responsible development and use by our customers

- The Transparency and Openness Promotion (TOP) framework was updated in 2025, now including seven Research Practices, two Verification Practices, and four Verification Study types, providing comprehensive recommendations for researchers. - Emphasis is placed on minimizing unethical behavior in research through adoption of general practices sourced from multiple guidelines, promoting responsible scholarship. - Researchers are encouraged to make data and products available to others at minimal or no cost, fostering knowledge sharing, collaboration, and broader perspectives. - Standardized disclosures are recommended to enhance clarity, transparency, and equity, while also streamlining compliance requirements and reducing administrative burden. - Best practices for transparent, reproducible, and ethical research are detailed in technical notes, guiding researchers in responsible conduct. - Developers of research software are urged to uphold ethical responsibilities, ensuring transparency, accountability, and data integrity in their work. - Survey processes require verified email collection and use screening questions to ensure data quality and respondent authenticity. - Population datasets and standardized procedures are used to ensure representative sampling and transparency in survey research. - Support resources and help centers are available to guide users in implementing transparent practices and using research tools responsibly.
